

# WEB TECHNOLOGY LAB MANUAL

Educate Elevate Enlighten

JSS Mahavidyalaya  
**JSS Science And Technology University**  
 (Established Under JSS Science and Technology University Act No. 43 of 2013)

<b>Course Title: Web Technology Laboratory</b>	<b>Course Code: 20CS68L</b>
<b>Credits: 1.5</b>	<b>Contact Hours (L: T: P): 0:0:39</b>
<b>Type of Course: Practical</b>	<b>Category: Professional Core Course</b>
<b>CIE Marks: 50</b>	<b>SEE Marks: 50</b>

**Pre-requisite:** Knowledge programming, Database Systems and Networks.

**Course Objectives:** The course should enable the students to:

Sl. No.	Course Objectives
1	Design static and dynamic web pages.
2	Familiarize with client side and server side programming.
3	Learn database connectivity to web applications.

Weeks	List of Programs	No. of Hours
1	Design web a page for the department timetable containing a suitable header, footer, description of the course codes and titles, faculty name and initialises, etc., use <i>href</i> , list tags and add University logo as a background. Using <i>table</i> tag and additional features like spanning rows, columns and table borders. [Refer your class timetable]	3
2	a) Create a form to collect Student feedback. (Use textbox, text area, checkbox, radio button, select box etc.). b) Create a web page using frame. Divide the page into two parts with Navigation links on left hand side of page (width=20%) and content page on right hand side of page (width = 80%). On clicking the navigation Links corresponding content must be shown on the right-hand side.	3
3	a) Create a web page using frame. Divide the page into two parts with Navigation links on left hand side of page (width=20%) and content page on right hand side of page (width = 80%). On clicking the navigation Links corresponding content must be shown on the right-hand side. b) Write HTML code to develop a webpage having two frames that divide the webpage into two equal rows and then divide the row into equal columns fill each frame with a different background colour.	3
4	Create your resume using HTML tags also experiment with colors, text (bold, italic and different headings), image, link, size and also other related tags.	3
5	Design a web page using CSS with suitable design for the following: i. Demonstrate different font styles ii. Control the repetition of image with background-repeat property iii. Define style for links as a: link, a: active, a: hover, a: visited iv. Demonstrate Element visibility property	3
6	a) Design a web page of your institute (week-1) with an attractive background color, text color, an Image, font etc. (use internal CSS). Use External CSS to format the class timetable. b) Use External, Internal, and Inline CSS to format resume that you created in Week 4	3

Educate Elevate Enlighten

JSS Mahavidyapeetha  
**JSS Science And Technology University**  
 (Established Under JSS Science and Technology University Act No. 43 of 2013)

7	a) Develop simple calculator for Addition, Subtraction, Multiplication and Division operation using JavaScript. b) Create HTML Page that contains form with fields Name, Email, Mobile No, Gender, Favorite Color and a button. Write a JavaScript code to validate all the fields when the button is clicked, later combine and display the information in textbox.	3
8	Write an XHTML document which displays a form containing text elements to input register number, sub-code, marks in three tests and a button element. Also write Java script compute the average of two best tests on click of button and print average marks using alert. Validate all the fields using JavaScript.	3
9	Develop an XHTML document and Java script to validate the following fields in a registration page: i. User ID (must be of length 5 to 12) ii. Name (only alphabets and the length should not be less than 15 characters) iii. Password (must be eight characters including one uppercase letter, one special character and alphanumeric characters) iv. E-mail (should not contain invalid addresses)	3
10	a) Write a PHP script to display today's date in dd-mm-yyyy format. b) Write a PHP script to check whether the number is prime or not when user input a valid number from client side.	3
11	Create HTML page that contain textbox, submit / reset button. Write PHP script to display this information and also store into a text file.	3
12	Write a PHP script for login authentication. Design an HTML form which takes Username and Password from user and validate against stored Username and Password in a file.	3
13	<b>Lab Test/Event</b>	3

## 2)

a) Create a form to collect Student feedback. (Use textbox, text area, checkbox, radio button, select box etc.

```
<!DOCTYPE html>
<html>
<head>
  <title>Student-Feedback</title>
  <style type="text/css">
    body {
      font-family: Arial, sans-serif;
      margin: 0;
      padding: 0;
      background-color: #f4f4f4;
    }
    h1 {
      text-align: center;
      color: #333;
    }
    form {
      max-width: 500px;
      margin: 0 auto;
      background: #fff;
      padding: 20px;
      border-radius: 5px;
      box-shadow: 0 0 10px rgba(0,0,0,0.1);
    }
    label {
      display: block;
      margin-bottom: 5px;
      color: #555;
    }
    input[type="text"],
    input[type="email"],
    textarea {
      width: calc(100% - 12px);
      padding: 7px;
      margin-bottom: 15px;
      border: 1px solid #ddd;
      border-radius: 2px;
    }
    select {
      width: 100%;
      padding: 7px;
      margin-bottom: 15px;
      border: 1px solid #ddd;
      border-radius: 2px;
    }
    input[type="radio"],
    input[type="checkbox"] {
      margin-bottom: 15px;
    }
```

```

}
textarea {
    resize: vertical;
}
input[type="submit"] {
    background: #007bff;
    color: #fff;
    border: none;
    padding: 10px 15px;

## Chamundeshwari Temple

ArticleTalk

From Wikipedia, the free encyclopedia

The **Chamundeshwari Temple** is a Hindu temple located on the top of **Chamundi Hills** about 13 km from the palace city of **Mysuru** in the state of **Karnataka** in **India**.<sup>[1]</sup> The temple was named after **Chamundeshwari**, or, the fierce form of **Shakti**, a **tutelary deity** held in reverence for centuries by the **Maharaja of Mysuru**.

Chamundeshwari is called by the people of Karnataka as Nanda Devi (ನಂದಾ ದೇವಿ), which means state Goddess. It is situated at the elevation of around 3300 ft from the mean sea level.

It is believed that Goddess **Durga** slayed the demon king **Mahishasura** on the top of this hill which was ruled by him. The place was later known as **Mahishashooru** (Place of Mahisha). The British changed it to **Mysore** and later **Karnataka** into **Mysuru**.

Krouncha Peetha

[ edit ]

Main articles: *Dakshya Yaga* and *Shakti Peethas*

The Chamundeshwari Temple is considered as a **Shakti Peetha** and one among the 18 Shakti Peethas. It is known as Krouncha Pitha as the region was known in Puranic times as Krouncha Parit. It is said that the hair of **Sati** fell here.<sup>[2]</sup>

Description

[ edit ]

The original shrine is thought to have been built in the 12th century by the Rulers of the **Hoyasala Dynasty** while its tower was probably built by the Rulers of the **Vijayanagara Empire** in the 17th century. In 1659, a staircase of one thousand steps was built leading up to the 3000-foot summit of the hill.<sup>[3]</sup> At the temple are several images of **Nandi** (the bull mount of **Shiva**). There is a huge **gymite** Nandi on the 700th step on the hill in front of a small Shiva temple a short distance away. Believed to be sculpted in the 2nd century CE, this Nandi is over 15 feet high and 24 feet long with exquisite bells around its neck.<sup>[*citation needed*]</sup>

3)

- a. Create a web page using frame. Divide the page into two parts with Navigation links on left hand side of page (width=20%) and content page on right hand side of page (width 80%). On clicking the navigation Links corresponding content must be shown on the right-hand side.

**b. (REFER 2 (B))**

- c. Write HTML code to develop a webpage having two frames that divide the webpage into two equal rows and then divide the row into equal columns fill each frame with a different background colour.

## 5. Design a web page using CSS with suitable design for the following:

1. Demonstrate different font styles
2. Control the repetition of image with background-repeat property
3. Define style for links as a link, a: active, a: hover, a: visited
4. Demonstrate Element visibility property

### Index.html

```
<!DOCTYPE html>
<html>
<head>
  <title>CSS Design Example</title>
  <link rel="stylesheet" href="style.css">
</head>
<body>
  <section>

    <h1 class="heading">1. different font styles
    </h1>
    <p class="normal">WEB TECHNOLOGY <p>[This is a normal paragraph]</p></p>
    <p class="italic">WEB TECHNOLOGY <p>[This paragraph is italic]</p></p>
    <p class="oblique">WEB TECHNOLOGY <p>[This paragraph is oblique]</p></p>
    <p class="bold">WEB TECHNOLOGY <p>[This paragraph is bold]</p></p>
    <p class="small-caps">WEB TECHNOLOGY <p>[this paragraph is small
caps]</p></p>

    <h1>This is h1</h1>
    <h2>This is h2</h2>
    <h6>This is h6</h6>
    <h3>Link Styles</h3>
  </section>
  <section>
    <h1 class="heading">2. style for links as a: link, a: active, a: hover,
a: visited
    </h1>
    <p class="links">Active: Green <br> Visited: Orange <br> Hover: red <br>
Link:blue</p>
    <ul>
      <li><a href="#1">Link 1</a></li>
      <li><a href="#2">Link 2</a></li>
      <li><a href="#3">Link 3</a></li>
      <li><a href="#4">Link 4</a></li>
    </ul>
  </section>
  <section>
    <h1 class="heading">3. Element visibility property </h1>
    <p>This paragraph demonstrates the element visibility property.</p>
    <div class="hidden-element">
```

```

        This element is hidden.
    </div>
</section>
<section>
    <h1 class="heading">4. Background repeat</h1>
    <div class="bg repeat"></div>
    <h1 class="heading">4. Background no repeat</h1>
    <div class="bg norepeat"></div>
</section>

</body>
</html>

```

### Style.css

```

h1.heading{
    font-family: Verdana, Geneva, Tahoma, sans-serif;
    color: rgb(255, 0, 34);
    text-decoration: double;
    text-transform: uppercase;
}
h1 {
    font-family: Arial, sans-serif;
}

p {
    font-family: 'Times New Roman', serif;

  color: blue;
}
section{
  border: 1px solid black;
  padding: 10px;
}
.small-caps{
  font-variant: small-caps;
  color: blue;
}
Green{
  color: green;
}
```

**OUTPUT:**

5/8/24, 9:35 PM CSS Design Example

### 1. DIFFERENT FONT STYLES

WEB TECHNOLOGY

[This is a normal paragraph]

*WEB TECHNOLOGY*

[This paragraph is italic]

**WEB TECHNOLOGY**

[This paragraph is oblique]

**WEB TECHNOLOGY**

[This paragraph is bold]

**WEB TECHNOLOGY**

[this paragraph is small caps]

**This is h1**

**This is h2**

This is h6

**Link Styles**

### 2. STYLE FOR LINKS AS A: LINK, A: ACTIVE, A: HOVER, A: VISITED

Active: Green  
Visited: Orange  
Hover: red  
Link:blue

- [Link 1](#)
- [Link 2](#)
- [Link 3](#)
- [Link 4](#)

### 3. ELEMENT VISIBILITY PROPERTY

This paragraph demonstrates the element visibility property.

127.0.0.1:3000/5/index.html#1 1/3

5/8/24, 9:35 PM CSS Design Example

### 4. BACKGROUND REPEAT

### 4.BACKGROUND NO REPEAT

127.0.0.1:3000/5/index.html#1 2/3

6.

a) Design a web page of your institute (week-1) with an attractive background color, text color, an Image, font etc. (use internal CSS), Use External CSS to format the class timetable.

10)

a. Write a PHP script to display today's date in dd-mm-yyyy format.

```
<!DOCTYPE html>

<head>
  <title>Date</title>
  <style>
    h1{
      text-align: center;
    }
    date{
      color: green;
    }
  </style>
</head>
<body>
<h1>Today's date is
<date>
<?php
$today= date("d-m-Y");
echo $today;
?>
</date>
</h1>

</body>
</html>
```

**OUTPUT:**

Today's date is 10-07-2024

**b. Write a PHP script to check whether the number is prime or not when user input a valid number from client side.**

```
<!DOCTYPE html>
<html>
<head>
  <title>Prime Number Checker</title>
</head>
<body>
  <h1>Prime Number Checker</h1>
  <form method="POST">
    <label>Number</label>
    <input name="num" required/>
    <button type="submit">Check!</button>
  </form>
  <p>
    <?php
    if ($_SERVER["REQUEST_METHOD"] == "POST") {
      $num = $_POST["num"];
      if ($num == 1 || $num == 0) {
        echo "The number $num is neither prime nor not prime";
        return;
      }
      $flag = 0;
      for ($i = 2; $i <= sqrt($num); $i++) {
        if ($num % $i == 0) {
          $flag = 1;
          break;
        }
      }
      if ($flag == 1)
        echo "The number $num is not a prime number";
      else
        echo "The number $num is a prime number";
    }
    ?>
  </p>
</body>
</html>
```

**OUTPUT:**

# Prime Number Checker

Number

The number 4 is not a prime number

11. Create HTML page that contain textbox, submit/reset button. Write PHP script to display this information and also store into a text file.

### STEPS FOR THE EXECUTION

1.Create into.txt and **index.php** file code accordingly. in Same directory.

2. change the file.txt mode.

> **chmod 777 info.txt**

3. Go to browser and execute the **filename.php**.

### Prog11.php

```
<!DOCTYPE html>
<html>
<head>
    <title>Thoughts</title>
    <style>
        body {
            background: #eee;
        }

        label {
            display: block;
            font-size: 25px;
        }

        button {
            padding: 10px;
        }
    </style>
</head>
<body>
    <?php
    if ($_SERVER["REQUEST_METHOD"] == "POST") {
        $info = $_POST["info"];
        $info_file = fopen("info.txt", "w");
        fwrite($info_file, $info);
        fclose($info_file);
    }
    ?>
    <form method="POST">
        <label>Information:</label>
        <textarea rows="20" cols="80" name="info">
    </textarea>
    <div>
        <button type="submit">Submit</button>
        <button type="reset">Reset</button>
    </div>
    <div class="saved">
        <h1>Saved Information</h1>
        <?php

        if ($file) {
            while (($line = fgets($file)) !== false) {
```

```
        echo "<p>$line</p>";
    }
    fclose($file);
}
?>
</div>
</form>
</body>
```

### Info.txt

WELCOME TO WEB TECH LAB

### OUTPUT:

Information:

## Saved Information

WELCOME TO WEB TECH LAB

**12. Write a PHP script for login authentication. Design an HTML form which takes Username and Password from user and validate against stored Username and Password in a file.**

### STEPS FOR THE EXECUTION

1. Create into.txt and **index.php** file code accordingly. in Same directory.

2. change the file.txt mode.

**>chmod 777 info.txt**

3. Go to browser and execute the **filename.php**.

### Prog12.php

```
<!DOCTYPE html>
<html>
<head>
  <title>Login</title>
  <style>
    body {
      font-family: sans-serif;
      background: #eee;
      text-align: center;
    }
    form {
      background: #fff;
      margin: 0 8rem;
      border: 1px solid;
    }
    label {
      display: block;
      font-weight: bold;
      font-size: 1.2rem;
      margin-top: 20px;
    }
    input {
      display: block;
      margin: 0 auto;
      padding: 5px;
    }
    button {
      margin: 10px auto;
      display: block;
      padding: 1rem;
    }
  </style>
</head>
<body>
  <h1>Login</h1>
  <form method="POST">
    <label>Username:</label>
    <input name="username">
    <label for="password">Password:</label>
```

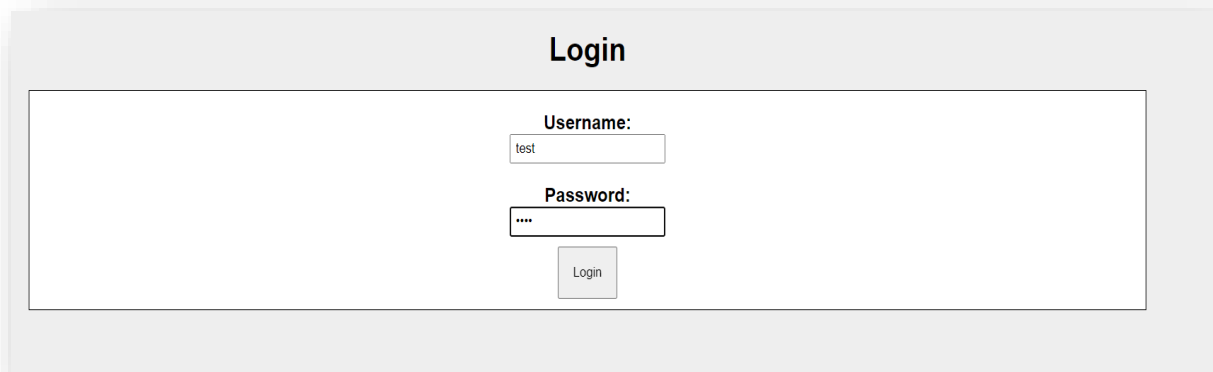

```
<input type="password" name="password">
<button >Login</button>
</form>
<script>
  <?php
    if ($_SERVER["REQUEST_METHOD"] == "POST") {
      $uname = $_POST["username"];
      $pass = $_POST["password"];
      $file = fopen("loginDetails.txt", "r");

      $content = fgets($file);
      if ($content == $uname . ":" . $pass) {
        echo "alert('Access granted!')";
      } else {
        echo "alert('Incorrect')";
      }
    }
  ?>
</script>
</body>
</html>
```

**Login.txt**

test:test

**OUTPUT:**

A screenshot of a web browser displaying a login form. The form is titled "Login" and is contained within a light gray box. It features two input fields: "Username:" with the text "test" entered, and "Password:" with masked characters "\*\*\*\*". Below these fields is a "Login" button.
